

CONTENTS

ANALYTICAL METHODS IN CONDUCTION HEAT TRANSFER—SECOND EDITION

1 REVIEW OF ELEMENTARY PROBLEMS

- 1•0 INTRODUCTION
- 1•1 PROBLEM FORMULATION
 - 1•1•1 The energy balance
 - 1•1•2 Rate equations
 - 1•1•3 Differential equations
 - 1•1•4 Boundary and initial conditions
- 1•2 SOLUTIONS TO ELEMENTARY PROBLEMS
 - 1•2•1 Simple plane wall
 - 1•2•2 Radial heat flow in a cylinder
 - 1•2•3 Energy generation in a plane wall
 - 1•2•4 The thin rod
 - 1•2•5 Lumped-system transients
- 1•3 INTRODUCTION TO ADVANCED PROBLEMS
- SELECTED REFERENCES
- EXERCISES

2 BESSEL'S EQUATION AND RELATED FUNCTIONS

- 2•0 INTRODUCTION
- 2•1 SERIES SOLUTIONS TO ORDINARY DIFFERENTIAL EQUATIONS
 - 2•1•1 Introduction
 - 2•1•2 The method of Frobenius
- 2•2 ORDINARY BESSEL FUNCTIONS
 - 2•2•1 Series solution of a zero-order Bessel equation
 - 2•2•2 Behavior of zero-order Bessel functions
 - 2•2•3 Bessel functions of positive integer order k
 - 2•2•4 Relations between Bessel functions and their derivatives
 - 2•2•5 The gamma function
 - 2•2•6 Bessel functions of arbitrary order k
 - 2•2•7 Integration of Bessel functions
 - 2•2•8 Asymptotic behavior of Bessel functions
- 2•3 MODIFIED BESSEL FUNCTIONS
 - 2•3•1 Series solution of a modified Bessel equation
 - 2•3•2 Behavior of modified Bessel functions
 - 2•3•3 Modified Bessel function relations
- 2•4 THE GENERAL BESSEL EQUATION
- 2•5 KELVIN FUNCTIONS
- SELECTED REFERENCES
- EXERCISES

3 SEPARATION OF VARIABLES

- 3•0 INTRODUCTION
- 3•1 ONE-DIMENSIONAL PROBLEMS
 - 3•1•1 Plane-wall transient, specified-temperature boundary
 - 3•1•2 Orthogonality
 - 3•1•3 Plane-wall transient, initial conditions
 - 3•1•4 Plane-wall transient, convection boundary
 - 3•1•5 Plane-wall transient, nonzero-heat-flux boundary
 - 3•1•6 Summary
 - 3•1•7 Time-dependent nonhomogeneous terms
- 3•2 TWO-DIMENSIONAL PROBLEMS
 - 3•2•1 Square region, steady-state energy generation
 - 3•2•2 Square region, transient problem
 - 3•2•3 Summary
- 3•3 SUPPLEMENTARY PROBLEMS
 - 3•3•1 Solid cylinder, specified-temperature boundary
 - 3•3•2 Solid cylinder, convection boundary

- 3•3•3 Hollow cylinder, specified-temperature boundary
 - 3•3•4 Solid cylinder, peripheral surface-temperature variation
 - 3•3•5 Solid sphere, specified surface temperature
 - 3•3•6 Reduction to one-dimensional transients
- 3•4 SUMMARY REMARKS ON SEPARATION OF VARIABLES
- SELECTED REFERENCES
- EXERCISES

4 SUPERPOSITION

- 4•0 INTRODUCTION
- 4•1 SIMPLIFICATION OF NONHOMOGENEOUS PROBLEMS
- 4•2 DUHAMEL'S THEOREM
- SELECTED REFERENCES
- EXERCISES

5 COMPLEX COMBINATION

- 5•0 INTRODUCTION
- 5•1 LUMPED SYSTEMS
- 5•2 THE SEMI-INFINITE SOLID
- 5•3 SUMMARY REMARKS ON COMPLEX COMBINATION
- SELECTED REFERENCES
- EXERCISES

6 LAPLACE TRANSFORMS

- 6•0 INTRODUCTION
- 6•1 THE LAPLACE TRANSFORMATION
 - 6•1•1 Definition
 - 6•1•2 Transformation of ordinary derivatives
 - 6•1•3 Transformation of functions of two variables
- 6•2 INVERSION OF TRANSFORMED FUNCTIONS
 - 6•2•1 Partial fractions
 - 6•2•2 Real convolution theorem
- 6•3 SOLUTION TO ORDINARY DIFFERENTIAL EQUATIONS
- 6•4 SOLUTION TO PARTIAL DIFFERENTIAL EQUATIONS
 - 6•4•1 The plane wall
 - 6•4•2 The semi-infinite solid
- SELECTED REFERENCES
- EXERCISES

7 NORMALIZATION

- 7•0 INTRODUCTION
- 7•1 PARAMETER SIMPLIFICATION
 - 7•1•1 Simplification of results
 - 7•1•2 Simplification of differential equations
- 7•2 ENGINEERING APPROXIMATIONS
 - 7•2•1 Biot number significance
 - 7•2•2 Response-time estimates
 - 7•2•3 Penetration-depth estimate
 - 7•2•4 Numerical calculations
- 7•3 COMBINATION OF VARIABLES
- SELECTED REFERENCE
- EXERCISES

8 FINITE DIFFERENCES

- 8•0 INTRODUCTION
- 8•1 FUNDAMENTAL CONCEPTS
 - 8•1•1 Matrix algebra
 - 8•1•2 Approximation of conduction rate equations
- 8•2 DISCRETIZING THE SPATIAL PROBLEM
 - 8•2•1 Interior nodes
 - 8•2•2 Boundary nodes
 - 8•2•3 Initial condition
 - 8•2•4 Summary
 - 8•2•5 Heat-flow computation

- 8•3 STEADY-STATE PROBLEMS
 - 8•3•1 Discretization example
 - 8•3•2 Gaussian elimination
 - 8•3•3 Cholesky decomposition
 - 8•3•4 Numerical results
- 8•4 TRANSIENT PROBLEMS
 - 8•4•1 Discretization examples
 - 8•4•2 Euler approximate solution
 - 8•4•3 Crank-Nicolson approximate solution
 - 8•4•4 Numerical results
- 8•5 ANALYSIS OF TRANSIENT SOLUTIONS
 - 8•5•1 Exact solution of $\zeta t + St = r$
 - 8•5•2 Euler and Crank-Nicolson solutions of $\zeta t + St = r$
 - 8•5•3 Comparison of solutions to $\zeta t + St = r$
 - 8•5•4 Critical-time-step estimate
- 8•6 SUPPLEMENTARY PROBLEMS
 - 8•6•1 Irregular nodal-point locations
 - 8•6•2 Time-dependent specified nodal temperatures
 - 8•6•3 Variable ζ , S and r
 - 8•6•4 Cylindrical coordinates
- 8•7 SUMMARY REMARKS ON FINITE DIFFERENCES
- SELECTED REFERENCES
- EXERCISES

9 FINITE ELEMENTS

- 9•0 INTRODUCTION
- 9•1 FUNDAMENTAL CONCEPTS
 - 9•1•1 Matrix calculus
 - 9•1•2 Galerkin weighted-residual method
 - 9•1•3 Triangular coordinates
- 9•2 DISCRETIZING THE SPATIAL PROBLEM
 - 9•2•1 Interior elements
 - 9•2•2 Boundary segments
 - 9•2•3 Heat-flow computation
 - 9•2•4 Program *FEHT*
- 9•3 STEADY-STATE PROBLEMS
 - 9•3•1 Discretization example
 - 9•3•2 Numerical results
- 9•4 TRANSIENT PROBLEMS
 - 9•4•1 Discretization example
 - 9•4•2 Numerical results
- 9•5 ANALYSIS OF TRANSIENT SOLUTIONS
 - 9•5•1 Exact solution of $\zeta t + St = r$
 - 9•5•2 Euler and Crank-Nicolson solutions of $\zeta t + St = r$
 - 9•5•3 Critical-time-step estimate
- 9•6 SUPPLEMENTARY PROBLEMS
 - 9•6•1 Lumped-capacitance formulation
 - 9•6•2 Cylindrical coordinates
 - 9•6•3 Three-dimensional problems
 - 9•6•4 Other two-dimensional elements
- 9•7 SUMMARY REMARKS ON FINITE ELEMENTS
- SELECTED REFERENCES
- EXERCISES

APPENDICES

- A ORDINARY DIFFERENTIAL EQUATIONS
 - B BESSEL FUNCTION RELATIONS
 - C HELPFUL SERIES SUMMATIONS
 - D TABLES OF EIGENCONDITION ROOTS
 - E LAPLACE TRANSFORM PAIRS
 - F COMPREHENSIVE PROBLEMS
 - G COURSE CONTENT
 - H CHAPTER COMMENTS
 - I COMPUTER SUBROUTINES
 - J NOTATION
 - K THERMAL PROPERTIES FOR CONDUCTION
- INDEX
